WORKPLACES: WORSE FOR WOMEN

ANALYSIS OF WORKPLACE POLICIES ON SEXUAL AND REPRODUCTIVE HEALTH AND RIGHTS AND GENDER EQUALITY OF 197 GLOBAL ORGANISATIONS ACTIVE IN HEALTH

2023 Global Health 50/50 Report
Global Health 50/50® is an independent not-for-profit initiative. Global Health 50/50 was co-founded by Professors Sarah Hawkes and Kent Buse. It is staffed by a dedicated collective of researchers, strategists and communications experts most of whom work in the global health sphere while also contributing to the work and aims of GH5050. Sonja Tanaka guides the development of the global Report. Collective members who contributed to the 2023 Report include: Bea Coates, Alison Dunn, Ella Fegitz, Jasmine Gideon, Manasi Hansoge, Unisaa Hussein, Aaron Koay, Suna Lee, Victoria Olarewaju, Alex Parker, Chelsea Roesch, Ashley Sheffel, Vedant Shukla and David Zezai.

We are grateful to Minakshi Dahal and Sarmila Dhakal of CREHPA for their research contributions.

We thank Gabriela Alvarez (UNFPA), Eszter Kismödi (SRH Matters), Therese Mahon (Global Menstrual Collective) and Nerima Were (KELIN) for their advice.

The initiative is guided by a diverse independent Advisory Council and charitable oversight is provided by a Board of Trustees. We are deeply indebted to the members of both of these bodies.

GH5050 is grateful to the many people who shared their expertise, insights and experiences in the development of this Report, and to the 73 organisations who validated their data with us.

This Report was funded by a grant from The Bill & Melinda Gates Foundation.

Global Health 50/50 is a registered UK Charity (Registration Number: 1194015).

Global Health 50/50 Report 2023 is published under a Creative Commons Attribution NonCommercial 4.0 International Licence.

All care has been taken to ensure the accuracy of the data reported. However, if you believe that an error has been made, please contact: info@globalhealth5050.org.

- Individual profile pages of organisations’ results over six years can be found at: [https://globalhealth5050.org/report-profile/](https://globalhealth5050.org/report-profile/)

- The interactive Gender and Health Index can be found at: [GlobalHealth5050.org/data](GlobalHealth5050.org/data)

- Since 2019, GH5050 has invited artists from around the world to engage in and submit their work to the This is Gender collection, a collective effort to reimagine and reframe gender imagery globally. Explore the full collection here: [https://globalhealth5050.org/this-is-gender/](https://globalhealth5050.org/this-is-gender/)
Dr. Natalia Kanem, Executive Director, UNFPA

Good sexual and reproductive health, based on principles of human rights and respect for bodily autonomy, are fundamental to achieving gender equality and sustainable development. Yet around the world, Covid-19, conflict, food insecurity, and climate-related disasters all are setting back development progress, especially for women and girls. We witness women’s rights being subverted, their needs neglected, and political pushback from various quarters relegating them, in some cases, to second-class citizens.

The global health and development sector generally recognizes and supports women’s and girls’ rights, and aims to deliver on policies, programmes and practices that promote the realization of sexual and reproductive health and rights for all.

The 1994 International Conference on Population and Development in Cairo brought together a remarkable global consensus putting human dignity and rights, including the right to plan a family, at the heart of development. Nearly 30 years on, The Global Health 50/50 (GH5050) Report on sexual and reproductive health and rights could not be timelier. With ICPD30 on the horizon, we have an opportunity to renew the collective promise to keep the rights and choices of women and girls at the centre of sustainable development.

Why are global health CEOs and board chairs still predominantly men? Why is the increase in women’s global health leadership and power so glacially slow? GH5050 helps us answer these fundamental questions.

Sexual and reproductive health and rights in the workplace play a powerful role in driving gender equality and women’s leadership and, by consequence, more equitable, just and inclusive sustainable development. Global health institutions will be more impactful and more effective in decision-making and implementation when there is strong, diverse leadership and representation from all parts of the world.

GH5050 encourages health advocates, staff and leaders to squarely frame sexual and reproductive health and rights in the workplace as a human rights issue and central to women’s leadership. I wholeheartedly endorse and support this. The global health community must listen to women’s voices and invest in their leadership.

Together, let us all take action to expand access to sexual and reproductive health and uphold rights and choices as the path to a more equal, prosperous and sustainable future for all.
The ghostly figures foreshadow the risks for these women working in such conditions. This captivating photograph taken on the outskirts of Dhaka, Bangladesh captures women working with synthetic materials without adequate protection. When questioned about the risks of exposure to plastics, they explained that they have limited alternatives to earn money. Remaining in their village or working in rural areas does not guarantee a stable income, especially during periods when there are no crops in the fields.

Debdatta Chakraborty is an amateur photographer from Kolkata, India.
HIDDEN OBSTACLES, LOST OPPORTUNITIES

At Global Health 50/50 (GH5050), we grapple to understand the hidden obstacles that keep some people from enjoying the same career opportunities as others, especially those barriers that keep women from being able to join, remain, advance and lead in global health.

In 2023, global backsliding on feminist progress prompted us to turn our focus to sexual and reproductive health and rights (SRHR) in the workplace. We believe SRHR are fundamental to gender equality. We see growing debate in some countries about the merits of progressive, rights-based policies, such as for menstruation or menopause. Yet in others we have seen a reversal of hard-won rights to SRHR and wellbeing, including protection from sexual assault and harassment and the growing erasure of rights for LGBTQI+ people. We are witnessing the impact of a rising, well-funded and active opposition to goals of gender equality alongside the continued effects of the COVID-19 pandemic.

The rollback of the constitutional right to abortion in the United States has increased state control over women’s bodies. In response, some private sector employers stepped in to provide support. This led us to the question, if the state fails to protect SRHR, should and can employers step up and step in? We thought this a question worthy of further examination, and it led to the genesis of the 2023 GH5050 Annual Report. We drew on years of groundbreaking analysis and advocacy by many organisations and individuals working in this field, and we are particularly grateful to the information available from Bloody Good Period, Global Menstrual Collective, Leave Network, Maternity Action, Oxford Human Rights Hub, and Women’s Health Matters.

We are also extremely grateful to the 73 organisations that voluntarily contributed to this Report and shared how they are approaching SRHR in the workplace - their attention to these policies as part of workplace health and wellbeing is welcome and trailblazing.

WORKPLACES: WORSE FOR WOMEN?

Historically, workplaces have been created for men and male bodies and a particular vision of masculine gender roles. For centuries, women have been subject to misogyny and ageism, and their bodies considered as weak, inadequate and unfit for formal employment. For example, menstruation and menopause have been viewed as reasons for why women are not suitable for many kinds of jobs, rather than as normal functions of the body that workplaces should be designed to accommodate.

SRHR disproportionately impact the lives and careers of women, transgender people and individuals who identify anywhere across a range of gender identities. Ignored or under-addressed, SRHR can result in career disruptions and perpetuate gender biases and discrimination in the workplace. Across the lifecourse this has cumulative impacts. UK research, for example, shows the gender pay gap widens among workers aged 40 and above, and is largest among people over 60, with ongoing consequences for pensions and financial wellbeing at older ages.1 Men also suffer from the impacts of stereotypical gender roles in the workplace. Inadequate or absent workplace policies can mean that men have limited opportunities to fulfil their caring roles and responsibilities – with impacts on their own mental health and quality of life, and overall family wellbeing.

GH5050 has adopted a life course approach to assessing SRHR needs over the course of a career. Policies that support flexible work arrangements to cope with menstrual or menopause symptoms, family planning, maternity leave, breastfeeding, childcare, and support people who suffer from violence in the domestic sphere (such as intimate partner violence or violence from other family members), can help people pursue a healthy private life and career goals.

We are pleased to see evidence of growing policy attention to parental and care leave. We encourage organisations to ensure that these are taken up by women and men to avoid the risk of reinforcing traditional gender roles. In contrast, policies on individual reproductive needs, including menstruation, menopause and abortion, are exceedingly scarce, as is dedicated support for people suffering violence at home. Further, we were not able to find international guidance for workplace policies on these SRHR needs. This is despite many organisations in our sample working to promote SRHR norms, policies, principles and services around the world. Some organisations appear to use sick leave for many SRHR issues - raising the question as to whether there are more inclusive and equitable solutions than requiring women to use sick leave allowances for having or stopping having periods?
WORD FROM THE COLLECTIVE

WOMEN SHOULD NOT BE STIGMATISED, DISCRIMINATED AGAINST, OR PENALISED FOR MENSTRUATION AND MENOPAUSE.

"WE ARE INFLATING THE STIGMA BY POSITIONING THESE LIFE EVENTS AS ILLNESSES, AND PENALISING WOMEN FOR WHAT IS COMPLETELY NATURAL. THIS IS DEEPLY ROOTED IN OUR SOCIETY, AND IT WILL THEREFORE REQUIRE CONCERTED ACTION AT ALL LEVELS TO TURN THE TIDE ON THIS NARRATIVE."

Right Honourable Helen Clark, former Prime Minister of New Zealand and lifelong gender equality advocate

THE STATE OF GENDER EQUALITY IN GLOBAL HEALTH: GH5050’S ANNUAL REVIEW

As we enter our sixth year of compiling this report, we are firmly encouraged by the dedication and enthusiasm of a range of organisations to engage with GH5050’s research process and the issue of gender equality, and we applaud the progress being made in some areas. We find growing use of the term ‘gender justice’, expanding commitments to gender equality that are explicitly inclusive of gender diversity and rapid growth in the availability of actionable, measurable diversity and inclusion policies. We also find, however, that at the current rate, we will not reach gender parity in leadership until 2037, which is disappointing and frustrating, but spurs us on to identify new ways to make change happen.

We recognise that workplaces reflect the social, cultural, economic and legal norms of the societies in which they exist and operate. Policies can help shift the dial on gender inequalities in the workplace, but are unlikely to be successful if gender inequalities in the home, in the care economy and in addressing the unpaid labour of women outside work are not accompanied by wider societal shifts towards more equitable societies for all. At GH5050 we have seen an encouraging increase in the number of policies across a range of issues. Policies are a good start, but are not cast-iron guarantees of practices that aim to achieve inclusive, respectful organisational cultures where people, in all their diversity, can participate equitably and thrive in their career choices.

Moving forward
The global community needs to develop employment norms and standards for SRHR in the workplace.

The findings show there are neither enough policies in place to protect women throughout their working life, nor are there common standards and practices around SRHR workplace policy. The global community must collaborate across sectors to develop employment norms and standards that promote and protect SRHR in the workplace and across the life course. This should be accompanied by independent accountability mechanisms, to challenge and transform the structures and values that perpetuate inequality.

The global health community is well placed to spearhead good practices in the workplace, so they are fit for everyone.

Given their mandates to deliver on SDGs and promote sexual and reproductive health of women and girls across the world, global health organisations can be global leaders in spearheading good practice in their own workplaces, making them fit for everyone.

Governments must enshrine SRHR in law for workplace justice. Legal protection is a bedrock to the realisation of rights. A lack of adequate protections and access to sexual and reproductive rights jeopardises women’s dignity, equal opportunities, health and lives. These issues are too important to be left to the discretion of employers and organisational policies. Women’s rights to reproductive justice in the workplace must be enshrined in law and all employers must conform and be held accountable.
ABOUT THE REPORT

A blurred red spot. This is what a girl looks like in this harsh part of the world. Afghanistan is a difficult place for women, and this region can be even more hostile. Kyrgyz people live a hard life on a plateau at an altitude of 3,000 metres. Women take care of children, yurts and livestock, whatever the weather, while men are far away from the village. Last year, more than 300 Kyrgyz nomads tried to flee the country and take refuge, but their attempt was unsuccessful and their future is uncertain now with the Taliban in control of the Badakhshan region. The photograph shows an unmarried woman in the traditional red veil but she is out of focus and only visible because of the stark white landscape. A background foregrounding her plight. The photograph emphasises a woman’s lack of status. Her attire might be seen from miles away, however, her humanity and rights are unequal, invisible, and unseen.

Silvia Alessi is an awarded photographer, born in Bergamo, Italy. Her main interest lies in documentary photography. With a strong commitment to ethics and collaboration, she engages with real people and stories to depict their narratives.
ABOUT THE REPORT

FIRST-EVER ASSESSMENT OF WORKPLACE POLICIES FOR SRHR ACROSS THE LIFE COURSE

For the first time, the Global Health 50/50 Report expands and deepens its focus on an area of policy that plays a decisive role in promoting equality of opportunity in the workplace: the extent to which the SRHR of the workforce are recognised and addressed in workplace policies.

GH5050 adopts a life course approach to assessing SRHR needs, taking into account different life events that may impact women’s entry, participation, advancement and retention in the workplace. Women’s careers are particularly affected by their SRHR needs, which, if not accounted for and accommodated, can result in career disruptions, contribute to ongoing gender pay gaps, and perpetuate gender biases and discrimination in the workplace.

We examined workplace policies in 197 global organisations active in global health on SRHR issues, from menstruation, abortion and menopause to antenatal care and caring responsibilities. GH5050’s biannual review of sexual harassment, parental leave and flexible working policies is presented within this SRHR life course framework. Our findings are presented in Part 1.

Global health workplaces should be frontrunners in modelling the highest possible standards for promoting the SRHR of their employees. We find some, albeit rare, examples of promise, and substantial space for leaders to set the agenda and show the way.

NOBODY’S FREE UNTIL EVERYBODY’S FREE
Scotland, 2023
Lauren McLaughlin

A typographic neon artwork where the two inner words ‘men’ and ‘power’ flash on and off consecutively but the full word ‘empowerment’ never lights up. Speaking in 1971 at the National Women’s Political Caucus in Washington pioneering nonviolent activist for women’s and civil rights, Fannie Lou Hamer declared; “Nobody’s free until everybody’s free”. Adopting Hamer’s words as the title, this work aims to address the persistence of white supremacy and patriarchal oppression and calls attention to the progress still to be made in the fight for equality. The shifting words show the dynamic aspect at play in how power is formed, never just one element, it is made possible through other words and by the context in which it is used and abused.

Lauren McLaughlin is a multidisciplinary artist whose focus is rooted in a desire to represent the undervalued and overlooked experiences of mothering, caregiving, and gendered work through a feminist lens.
ABOUT THE REPORT

ANNUAL ANALYSIS OF ORGANISATIONS’ GENDER-RELATED POLICIES AND PRACTICES

The 2023 Report takes an in-depth look at workplace policies alongside our annual analysis of 197 organisations’ gender-related policies and practices. Every year, GH5050 shines a light on whether and how organisations are playing their part in addressing two interlinked dimensions of inequality: inequality of opportunity in career pathways inside organisations; and inequality in who benefits from the global health system.

Part 2 of this Report presents our findings on the progress of organisations over six years, including on public commitments to gender equality, workplace gender equality, diversity and inclusion policies, representation in leadership, and reporting data disaggregated by sex. Part 3 presents organisational performance in 2023, as well as progress since 2020 by category (consistently high performers; fast risers; and stagnators).

Full details of the methods GH5050 employed to analyse SRHR policies, to collect data on the core variables, and to calculate organisational performance can be found in Annex 1.2.

THE GLOBAL HEALTH 50/50 REPORT AND ORGANISATIONAL SAMPLE

Through its annual Report and the Gender and Health Index, GH5050 assesses the gender-related policies and practices of global organisations (operational in a minimum of three countries) that aim to promote health and/or influence global health agendas and policy. The GH5050 Report and Index continue to provide the single-most comprehensive analysis on gender equality and the distribution of power and privilege in global health.

GH5050 has taken a deliberative approach to identifying a broad and representative sample of organisations active in global health, including organisations based in low- and middle-income countries, for inclusion in its annual reports. The sample currently contains 197 organisations from 10 ‘sub-sectors’, headquartered in 37 countries which, together, employ over 4.5 million people. Three organisations that had previously been in the sample ceased operations in 2022. This year’s sample comprises:

- 61 Nonprofit & non-governmental organisations
- 42 Private for-profit companies
- 17 Public-private partnerships
- 14 Multilateral and bilaterals
- 13 Funders and philanthropies
- 11 Research and surveillance
- 11 United Nations bodies
- 10 Consulting firms
- 10 Faith-based organisations
- 8 Regional political bodies
ABOUT THE REPORT

RESEARCH FRAMEWORK OF THE 2023 REPORT

1. COMMITMENTS TO REDISTRIBUTE POWER
   - Committing to gender equality
   - Defining gender

2. POLICIES TO TACKLE POWER & PRIVILEGE IMBALANCES
   - Workplace gender equality policies
   - Workplace diversity and inclusion policies
   - Board diversity and inclusion policies

3. DEMOGRAPHICS OF POWER AND PRIVILEGE
   - Gender parity in senior management and governing bodies
   - Gender of executive head and board chair
   - Nationality and education of executive heads

4. GENDERED POWER DYNAMICS DRIVING HEALTH INEQUALITIES
   - Sex-disaggregated monitoring and evaluation

NEW FOR 2023
- Sexual and reproductive health and rights in the workplace

EVERY TWO YEARS
- Sexual harassment policy
- Parental leave and support to new parents
- Flexible working
Organisations are largely silent on how they help to meet staff SRHR needs, apart from at the time of becoming a parent.

Responses to the diverse caring responsibilities of staff vary widely

Paid parental leave policies found for

- (135/197) of organisations - with paid leave allowances ranging from 2 to 39 weeks.
- 112 were explicitly inclusive of parenthood through adoption and/or surrogacy.
- 63 organisations reported caring leave (beyond parental leave) policies and/or other support programmes, such as subsidised child and elder care.
- 60% of organisations have family-friendly mental health policies.
- 67% of organisations have policies that allow staff to use sick leave for: menstruation, menopause, abortion, fertility treatment, antenatal care and/or pregnancy loss.
- 45 organisations have not had a woman CEO or board chair since 2018, when GH5050 began tracking - compared to 5 organisations that have not had a man CEO or board chair in that period.
- 46% of organisations provided details on their sexual harassment policies online - compared to 32% in 2019.
- 44% of organisations provide details on parental leave policies online - compared to 27% in 2019.

Strong commitment to gender equality, but inequalities in leadership continue

- Diversity and inclusion policies found for 65% of organisations - up from 44% in 2020.
- Gender equality workplace policies found for 65% of organisations - just 5% more than in 2020.
- Growing commitment to gender equality
In the office, a woman is taking care of a child while working. South Asian society is delicate when it comes to its gender roles, and the most sacred and significant one is the role of a mother. The family structure relies solely on women for the upbringing of children, whether they are married or single. Society does not allow them to neglect their motherly duties, even when they are at work and expected to fulfill their professional responsibilities. While child daycare facilities exist, they are often subject to judgement from the community. It is the woman alone who is expected to make this sacrifice. A woman’s role is still predominantly defined by motherhood; if she does not become a mother, her life is not considered fulfilled.

Mehreen Zain is an artist from Pakistan working in design. In her artistic practice, she is interested in capturing society’s paradoxes and patriarchal innuendos.
OVERVIEW
BREAKING THE SILENCE ON SRHR WORKPLACE POLICIES ACROSS THE LIFE COURSE

Sexual and reproductive health and rights (SRHR), including privacy and agency, are fundamental to gender equality in all spaces, including the workplace. Yet SRHR in the workplace is generally ignored, overlooked and often unspoken about. As people struggle with SRHR-related workplace stigma and discrimination, the silence continues. For women, the impact on career retention, promotion, progression and entry into leadership positions is harsh.

Alongside adequate global and national legal SRHR frameworks, workplace SRHR policies can provide an important lever for ensuring that people are able to stay and progress in their careers across the life course, while also removing stigma and taboo surrounding reproductive health. Leave and flexible working arrangements for employees experiencing painful periods, miscarriage, fertility treatment, abortion or pregnancy are essential components of realising SRHR. Reproductive needs do not, in most circumstances, reflect disease; they are part of day-to-day life for a significant proportion of the workforce. They can also be complex, change over the life course, and vary significantly from person to person.

Comprehensive SRHR workplace policies apply across the life course from the entry into the workforce, through all aspects of participation and advancement along a career ‘pipeline’ (see Figure). Progress is hastened by workplace policies that promote non-discrimination or affirmative action, tackle sexual harassment, discrimination and bullying, ensure safety in and around the workplace, and autonomy over health decisions.

What is the policy context of SRHR entitlements in the workplace?

Nearly 2.4 billion working age women live in countries that do not grant them the same rights as men. Ninety-three countries do not have legal mandates to ensure equal pay for work of equal value, and 30 still do not prohibit gender discrimination in employment. In 2023, the World Bank reported that the pace of legal reforms concerning the equal treatment of women around the world had plummeted to a 20-year low.

SRHR policies that are in place are most often the result of the legal jurisdiction of the country in which a workplace is based. Even where governments have made legal commitments to supporting SRHR, this is not always translated into practice. Further, 60% of the working-age global population are employed in the informal economy and may struggle to access SRHR and other protections at work. In some countries this may include a significant proportion of the health workforce who are employed as ‘volunteer’ community health workers.

In the absence of legal mandates, can workplace policies step in to fill the gap and how can these policies be made equally accessible to all employees working within the same organisation? How can employers be held to account if they fail to deliver on SRHR in the workplace or, conversely, how does good practice get more widely replicated? How can SRHR workplace policies be equitable and inclusive for all workers?

In this Report, we primarily use the term ‘women’ and we intend this to be inclusive while recognising that some people within and beyond this category may have divergent and unique needs. People who were born female who identify as women, trans men, non-binary, other gender identities, and some intersex people, may share many sexual and reproductive experiences, including menstruation and menopause. Trans, non-binary, and intersex individuals also have distinct SRHR requiring a specific policy focus. We also acknowledge limitations in the language of SRHR evidence, policy and practice in recognising this diversity.
**TAKING A (CAREER) LIFE COURSE APPROACH TO SRHR IN THE WORKPLACE**

- Recruitment policies and practices ensure non-discrimination and equality
- Responsive SRHR policies ensure employees are not penalised for having a reproductive system or for biological ageing
- Promotion of health and wellbeing around becoming a parent
- Respect for work-life balance, including policies addressing caring responsibilities and upholding the right to family life
- Appropriate adjustments for wellbeing and retention in older age

**CROSS CUTTING ISSUES**

- Non-discrimination and safe working environment free from harassment
- Equality on basis of sexual orientation and gender identity
- Promoting right to health and right to privacy
- No financial penalties accrued in realising rights

**FINDINGS**

**SEXUAL AND REPRODUCTIVE RIGHTS IN THE GLOBAL HEALTH WORKPLACE: WHAT IS THE STATUS?**

GH5050 reviewed the websites of 197 organisations, including any workplace policies, policy excerpts or mentions of benefits, and requested organisations to share with us relevant policies that are not in the public domain with GH5050.

We looked at the SRHR events presented in Box 1. We provide a deeper dive into the history of and debates surrounding one of these issues – menstrual leave policy – on pages 21.

We recognise that this is not necessarily a full and complete picture of SRHR policies across all 197 organisations. Some organisations may not specify discrete SRHR events in their policies, but operate on the principle that all conditions are covered under health and medical insurance policies and available to all employees. Other organisations may provide days of “special leave” or “personal leave”, available to all employees, and designed to cover these and other life events that require time off work. Still other organisations may be based in countries where legal provisions for SRHR issues in the workplace (e.g. paid time off for antenatal appointments, menstrual leave, etc) are already in place. Other organisations may be exceeding the minimum legal requirement, particularly in those countries where the law is lacking. In addition, this is but a subset of all SRH conditions that affect and impact on peoples’ health and wellbeing - pragmatically we were not able to review the entire spectrum of SRH conditions.

We have tried to capture some of this in our reporting, and are aware that in many cases we were not able to find specific details of policies that may be in operation. Furthermore, we only reviewed headquarter or global policies, which we understand may not necessarily apply to staff working in countries outside of the headquarter country office.

A total of 73 organisations validated the data collected on their organisations, including 30 who shared a total of 183 internal policy documents. Below, we present some background information for each of the SRHR areas, followed by our findings.
**Box 1. SRHR in the workplace: policy issues reviewed in the 2023 report**

**Reproductive rights across the life course**

Do workplace policies provide paid leave or other accommodations for:

- Menstruation
- Abortion
- Menopause?

Is time off for menstruation or menopause included in or supplemental to existing sick leave?

Is other support (e.g. financial) provided to enable access to safe abortion services?

**Safety and well-being in the workplace and beyond**

Do workplace policies provide:

- Flexible working arrangements for all staff
- Anti-sexual harassment
- Resources for staff experiencing domestic violence?

**Becoming a parent**

Do workplace policies provide adequate paid leave for:

- Antenatal care
- Pregnancy loss or stillbirth
- Fertility treatment
- Parental leave, for all parents, including via adoption or surrogacy?

Is financial or other support provided to enable access to fertility treatments, adoption or surrogacy?

**Working parents and carers**

Do workplaces provide:

- Support for new parents returning to work, such as breastfeeding facilities or flexible working
- Leave for family caring responsibilities, for e.g. adult family members or older children?
As debates around menstruation have become more mainstream, greater attention has been given to the ways in which it can impact on women in the workplace. Tensions continue to exist – with some framing of menstrual health (a term which includes a focus on wellbeing and not just the absence of disease), and responses to it, continuing to reinforce or challenge the medicalisation of menstruation. Alternative views contend that more focus must be given to underlying gendered social norms that create and reinforce the stigma associated with menstruation and inequalities. Race, ethnicity and other social identity markers and structural inequalities also shape experiences of menstrual stigma.

Menstrual leave policies have been in existence in some parts of the world since the early twentieth century but discussion has gathered pace since the mid 2010s (see map and page 21). Menstrual policies in the workplace take different forms, ranging from the provision of placing sanitary products in workplace toilets to introducing paid leave or flexible working for those who experience painful menstrual symptoms.
This map indicates all countries found to have an active law mandating the right to menstrual leave for all employees in the country. Several countries where parliamentarians have recently tabled menstrual leave are also indicated.

**Menstrual leave law: 7 countries**
- Japan
- Indonesia
- Taiwan
- Philippines
- Spain
- Italy
- South Korea
- Brazil
- Zambia
- Vietnam
- India
- Hong Kong
- Taiwan

**Bills tabled: 5 countries**
- Japan
- Indonesia
- Taiwan
- Philippines
- Spain
- Italy
- South Korea
- Brazil
- Zambia
- Vietnam
- India
- Hong Kong
- Taiwan

---

2023 Global Health 50/50 Report
FINDINGS

NO MENSTRUAL POLICIES
in the public domain for any of the 197 organisations

1 ORGANISATION
reported that it provides unpaid menstrual leave for headquarter staff, in accordance with national labour standards.

4 ORGANISATIONS
report the availability of personal leave, which can be used for menstruation.

1 ORGANISATION
reported that it ensured that no staff member ever ran out of sick leave.

14 ORGANISATIONS
report that while no specific leave or benefits were available, staff could request use of sick leave if unable to work due to menstrual symptoms.

LEAVE POLICIES AVAILABLE TO STAFF WITH SEVERE MENSTRUAL SYMPTOMS

UNPAID MENSTRUAL LEAVE
Organisation offers unpaid menstrual leave

• Global Health Innovative Technology Fund

SICK LEAVE
Organisation reports that employees may use paid sick leave for menstrual symptoms

• Abt Associates
• Equimundo
• FIND
• Global Fund to Fight AIDS, Tuberculosis & Malaria
• International AIDS Society
• International Rescue Committee
• International Vaccine Institute
• Ipas
• Management Sciences for Health
• Population Council
• Swedish International Development Cooperation Agency
• TB Alliance
• UNICEF
• United Nations Office on Drugs and Crime

PERSONAL LEAVE
Organisation reports that employees may use paid personal leave for menstrual symptoms

• CARE International
• EngenderHealth
• International Center for Research on Women
• Pathfinder International
PART 1. RESULTS

BOX 2. BREAKING BARRIERS: IMPLEMENTING MENSTRUAL LEAVE FOR A DIVERSE AND INCLUSIVE WORKPLACE

Meet Radhika Uppal and her supervisor, Sapna Kedia, who work at the International Center for Research on Women Asia, based in India. They became aware that some of their colleagues were struggling with severe pain during their menstrual cycles and were having to use sick leave when they were unable to work. Radhika and Sapna firmly believe that having a period is not an illness and that women should not have to use sick leave days to cope with painful menstruation.

To take action, Radhika and Sapna began by compiling information on menstrual leave policies. While they could not identify a universal standard, they discovered that a range of different organisations in India had publicly available policies. They presented a proposed menstrual leave policy to management, which was assessed and subsequently implemented by the Asia office for a six-month trial period in April 2023. Ravi Verma, Director of ICRW Asia, said, “We’re fully committed to ensuring the success of a menstrual leave policy in our workplace, which means we need to ensure that those who need it can access it.”

Though it is still early days, Sapna and Radhika have received positive feedback from their colleagues. They are confident that the introduction of the menstrual leave policy promotes equity and inclusivity within the organisation, while simultaneously combating the stigma surrounding menstruation.

THE RIGHT TO PLAY
Kenya, 2022
Lee-Ann Olwage

Portrait of 12-year-old Michealle Naeku, gazing directly into the camera with confidence. Naeku is an avid reader and dreams of becoming a nurse. She is a student at Kakenya’s Dream school in Enoosaen, Kenya, an educational program for girls from rural areas who have avoided FGM (female genital mutilation) and child marriage. This empowering initiative provides these young women with educational opportunities, empowering them to shape their own futures and break free from harmful traditions. It prompts us to ponder: What are the dreams of girls? And what unfolds when a nurturing and empowering environment allows them to learn and envision their aspirations?

Lee-Ann Olwage, born in 1986 in Durban, is a visual storyteller from South Africa who uses collaborative storytelling to explore themes relating to gender and identity.
**CHARTING THE RISE OF MENSTRUAL LEAVE POLICIES**

A review of the history and debates around menstrual health shows a distinct lack of consensus over the role of states and employers above and beyond the guarantee of a safe, supportive workplace equipped with good sanitation facilities.

Globally and historically, workplaces have served as sites for achieving wider societal goals relating to health and demography. In the first half of the 20th century the Soviet Union and several East and South-East Asian countries adopted menstrual leave policies (i.e. specified time off each month for women who menstruate). Concern has been raised that these policies reflected broader pronatalist goals and were used as a means of protecting women’s future reproductive capacity. Such an approach may have reached its nadir in 20th century Romania where workplaces were sites of enforcement of the state's aggressive pronatalist policies requiring women to undergo monthly gynaecological exams.

In several countries, notably Indonesia and Japan, trade unions also played a role in pushing for menstrual leave as a means of improving gender equality in the workplace. In Japan, women workers in the transport and textile sectors first campaigned for menstrual leave in the 1920s and 1930s, responding to the lack of adequate sanitation facilities in their workplaces and saw this as a symbol of women’s emancipation.

Towards the end of the 20th century, menstrual leave policies were adopted predominantly in countries experiencing rapid growth in highly feminised export sectors. Again the question of whether these policies are progressive symbols of the struggle for gender equality and good health, or merely serve to secure women’s reproductive roles, is not clear.

Since 2015 there has been renewed interest in the issue of menstrual leave (see Map, page 18). While these later stage policies are not completely removed from pro-natalist underpinnings, they are also increasingly framed around arguments relating to economic productivity with some attention given to the importance of women’s rights.

The 2000s also saw a growing number of corporations engaging in the debate around menstrual leave. The sportswear retailer Nike was technically the first global corporation to introduce guidelines on menstrual leave in 2007 when they were introduced into its “Code [of] Leadership Standards”. In 2016, a social enterprise, Co-exist, based in Bristol, UK became the first organisation to launch “period leave” for employees, while the Victorian Women’s Trust in Australia introduced a flexible working policy for staff members experiencing symptoms of menstruation or menopause. Similarly, in 2020 a high-profile food delivery company in India granted women up to ten days menstrual leave every year in an attempt to combat stigma around periods. In 2023, Spain became the first country to introduce three days of menstrual leave every month financed through the state social security system.

Menstrual policies generally offer either paid or unpaid time off work but in a small number of cases, particularly among the corporate sector, employees are offered a range of flexible working arrangements instead.

Despite the diversity of menstrual policies, the debate around their effectiveness to address menstrual health stigma and discrimination, and how to improve working conditions for people remains unclear. To date, there are no global studies of the impact of menstrual leave and there is little discussion of its use or implications for workplace gender relations. Similarly, no consideration has been given to any unintended consequences of menstrual leave. At the same time there is a lack of evidence around the impact of menstruation on careers.

A growing body of work is investigating how the provision of menstrual health-supportive facilities alongside social and behaviour change interventions in the workplace can positively impact women’s experiences at work. When implemented, menstrual policies must reflect a holistic approach that addresses both practical SRHR aspects, e.g. clean toilets, and adequate facilities for the safe disposal of menstrual hygiene products, and strategic SRHR workplace issues, such as challenging gender norms by addressing stigma around SRHR, and legal frameworks.

<table>
<thead>
<tr>
<th>Potential benefits</th>
<th>Potential pitfalls</th>
</tr>
</thead>
<tbody>
<tr>
<td>• offers a means of providing some respite from the workplace for those who experience menstrual cycle-related issues such as dysmenorrhea and endometriosis, without being penalised</td>
<td>• can perpetuate sexist beliefs and attitudes which in turn reinforce menstrual stigma</td>
</tr>
<tr>
<td>• offers the potential to create spaces where people can speak more openly about menstrual health, which can in turn contribute to reducing stigma around menstruation</td>
<td>• may impact the gender wage gap if employers choose not to recruit or promote women and others who menstruate if they believe they will take time off, or that implementing a menstrual leave policy may have a financial cost</td>
</tr>
<tr>
<td>• creates a separate category of menstrual leave that distinguishes it from medical or sick leave could combat the medicalisation of menstruation.</td>
<td>• can further reinforce the medicalisation of menstruation if they perpetuate the idea that menstruation is ‘debilitating’ and something that needs ‘fixing’.</td>

PART 1. RESULTS

ABORTION

Abortion care is an essential component of comprehensive SRHR, and a core principle of the realisation of bodily autonomy for women and girls. Provision of legal abortion services however continues to be highly contested across much of the world. Gender equality advocates face increased pressure as opposition has become more coordinated at both global and national levels, permeating multiple spaces and institutions.

Global evidence shows that outlawing abortions does not stop them from happening and that abortion rates tend to remain similar across countries regardless of the legal status. Moreover, evidence shows that abortion bans can be associated with increases in the number of unintended pregnancies.

The legal status of abortion varies widely across countries (see page 23). Globally, the Center for Reproductive Rights estimates that 40% of women live in countries with restrictive abortion laws. Despite continued challenges to access to safe abortion, there is some cause for hope. Over the period 2000-2022, 50 countries expanded the legal grounds for abortion. In high-income countries, with the exception of the United States, abortion is predominantly legal. In some contexts, particularly where the legal status of abortion permits, workplaces have recognised the need to support employees in this area. Workplace policies may include paid leave for those seeking abortion, as well as providing financial resources, for example to cover travel costs.

The artwork Red is a powerful expression of the outrage regarding the Supreme Court’s decision to overturn the landmark Roe v. Wade ruling. Protest and activism spill from the montage of new and familiar faces, fighting for the right to abortion as healthcare, choice, and bodily autonomy for women. The artwork is rich with feminist cultural references: the coathanger for self-abortion, the bra for burning, the banners and the faces of the women who led the way, and a gorilla face, a visual link to the Guerrilla Girls, a feminist movement fighting sexism and racism in art. All on a bed of red. It is raging and enraged.

Violet Costello, a 66-year-old Canadian multi-disciplinary artist, who vividly recalls the landmark decision of Roe v. Wade in the United States Supreme Court. To her disbelief, she witnesses that young women today possess fewer rights than she had for the majority of her life.

FINDINGS

1 organisational policy found with explicit mention of benefits relating to abortion services (although several organisations shared their staff handbooks that specified the organisation’s commitment to promoting access to safe abortion for all).

4 US-based organisations reported that travel funds are available to staff if they need to access medical services not available locally, including for abortion.

8 organisations reported that abortion services are covered by employers or national health insurance, where the service is legal.

10 organisations reported that staff could use sick leave, and 3 reported that staff could use personal leave, for abortion services.

Financial Support
Organisation reports that financial support is available to staff for travel to access medical services, including abortion

- Abt Associates
- Johnson & Johnson
- Gilead

“OUR MISSION AND OUR VALUES APPLY NOT ONLY TO OUR CLIENTS AND THE COMMUNITIES WE WORK ALONGSIDE, BUT ALSO TO HOW WE SHOW UP FOR AND SUPPORT ONE ANOTHER. THE ABT COMMUNITY HAS STAFF IN MANY STATES WHO WILL EXPERIENCE THE NEGATIVE IMPACTS OF OVERTURNING ROE V. WADE. WE REMAIN COMMITTED TO DEVELOPING DATA AND IMPLEMENTING POLICIES THAT SUPPORT OUR MISSION TO KEEP FAMILIES—INCLUDING WOMEN—SAFE AND HEALTHY, AND THAT COMMITMENT EXTENDS TO SUPPORTING OUR EMPLOYEES AND CLIENTS AROUND THE WORLD AS THEY MAKE DECISIONS TO ENSURE THEY AND THEIR FAMILIES ARE SAFE AND HEALTHY.”

Statement by Abt Associates President and CEO, Kathleen Flanagan on the Supreme Court Roe v. Wade ruling, June 24, 2022

“We support choice. We support our employees and their dependents in their decision to not remain pregnant, and we also support those that do. Our family leave programs, compressed work schedules, flexible hours, and work from almost anywhere policy are all designed to support the decisions our employees want to make and the life they want to live.”

Chief HR Officer, Brandon Guzzone, PSI
FERTILITY SUPPORT

Workplace policies on fertility can support women, men and people with diverse gender identities as they seek to conceive and create their families, and counter possible harm to the careers of people undergoing treatment.

Policies that offer access to fertility support for all employees, regardless of their gender identity, sexual orientation or relationship status, help to eliminate unnecessary barriers or discrimination. They can promote and provide a respectful environment for employees undergoing fertility treatments by offering flexible work arrangements and according privacy.

ORGANISATIONAL PROVISION OF GENDER-AFFIRMING CARE

Gender-affirming care includes a number of medical interventions that support and affirm an individual’s gender identity. Such interventions may include medical or surgical care if a person is seeking to transition, and may also include support for mental health, sexual health and reproductive health.

Examples of organisations that state that their medical insurance for employees includes coverage for inclusive and gender-affirming care include:

- Accenture
- Bloomberg Philanthropies
- EngenderHealth
- Novartis

“For more than 20 years, we have been supporting LGBTIQ+ inclusion through our policies and practices, and we are continuing to work to provide more for our people including…

Equal access to medical plans for our LGBTIQ+ people and their partners … and coverage for transgender-inclusive health care.”

Accenture

Chiara Luxardo

The path to parenthood for queer couples is not straightforward, but the artist is fortunate to live in one of the few countries where it is possible. As a lesbian couple, the journey to becoming parents is vastly different, involving careful planning, rationalisation, and preemptive anxiety in a world that largely caters to heteronormative ideals. The artwork takes a humorous approach to reflect the complex and arduous journey specific to same-sex couples. It captures the overwhelming psychosomatic experience of IVF while also celebrating the incredible potential of the female body.

Chiara is a documentary photographer and lens-based artist based in London, UK. In her work, she explores themes of family, relationships and queerness using intimate personal stories and portrait series.”
organisations reported that financial assistance and/or medical benefits are available to staff to facilitate access to fertility treatments.

organisations reported providing leave other than sick or personal leave available to staff, including dedicated assisted conception leave.

Several of the insurance or benefits policies we found covered ‘infertility’. It is unclear whether a covered person is only eligible for such services when they are deemed infertile, which is defined as the inability to conceive after a period of unprotected intercourse. Such policy language has been shown to discriminate against same-sex couples from accessing fertility treatments. Notably, the medical insurance plan for several United Nations agencies covers fertility treatment only in the case when infertility as a medical condition has been diagnosed – meaning that same sex couples or single people wishing to undergo fertility treatment might be disadvantaged.

organisations reported providing additional forms of support, such as educational and emotional support from fertility experts.

organisations reported that financial assistance and/or medical coverage are available to staff undergoing fertility treatment.

organisations reported availability of fertility leave.

organisations reported offering other forms of support, such as counselling and flexible working.

organisations reported that employees may use paid sick leave for fertility treatment.

ANTENATAL VISITS

Antenatal care plays a role in ensuring the health and well-being of pregnant women and their baby(ies). It often requires time away from work for appointments to monitor the progress of the pregnancy and provide necessary support, care and advice to the pregnant woman. Some countries mandate employers to provide women with paid time off from work for antenatal appointments, there may also be an entitlement for a partner to take time off to accompany the pregnant woman to her appointment. In other countries such laws are absent. An antenatal care workplace policy can provide employees with a range of support including paid time off for antenatal appointments, workplace adjustments, and enhanced occupational safety measures.

Zoë, a nurse who, like many others, has been tirelessly working during and after the COVID-19 pandemic, finds a moment of rest from the hectic pace of her daily work. The image echoes the visual language of grand portraits from history, adding a layer of dignity and significance to this ordinary scene. Traditionally, nurses have been depicted in art as supporting characters or in service to others, rarely showcased as individuals in their own right. However, this image presents Zoë as the focal point, bringing her presence and serenity to the forefront. Through her art, Maisie aims to make her twin sister Zoë visible, acknowledging her as an A&E nurse at the Whittington Hospital in London.

Maisie Broadhead is a London-based artist, her multi-disciplinary work often re-interprets aesthetics from art history genres, drawing links between narratives past and present.
24 organisations reported having some form of paid leave in place that staff could avail to attend their own, and in some cases, their partner’s, antenatal care services.

13 reported that antenatal care was covered by paid sick leave.

### PAID LEAVE
Organisation reports that employees have access to paid leave (such as family or health and safety leave, which may be supplementary to sick leave) to attend antenatal care services.

PART 1. RESULTS

MISCARRIAGE AND STILLBIRTH

Annually an estimated two million infants are stillborn, and more than 10 times that number of pregnancies end in miscarriage. Rates of stillbirth vary across the world, with women in low- and middle-income countries suffering higher rates than women in high-income countries. A baby who dies after 28 weeks of gestation is termed by WHO as a stillbirth, and those pregnancies spontaneously lost before that date are classified as miscarriages. The ‘cut-off’ in terms of numbers of weeks defining miscarriage or stillbirth varies from country to country.

Workplace policies on miscarriage and stillbirth can provide support and compassionate care to employees who experience either of these, and can include bereavement leave, access to counselling services, and resources to help navigate the emotional and physical aspects of pregnancy loss or miscarriage, and stillbirth.

ALPHA WOMAN I
Pakistan, 2021
Nifesah Mehru Nisa

A posture of power, an Alpha woman crossing her arms with strength. The composition portrays a focused and composed figure, utilising only a portion of the canvas but asserting her presence with confidence. She challenges us, her body obscured and covered in almost flat blue paint that defies the long history of the objectification of women’s bodies in art. The artwork explores the consequences of suppression and repression on both individuals and their surroundings. It aims to inspire empowerment, encouragement, and positivity.

Nifesah Mehru Nisa is a Pakistani artist based in Lahore. Through her art, she is interested in exploring the notions of feminism and inspiring positive social change.
FINDINGS

26 organisations reported that staff can avail of sick leave or bereavement leave in the event of a stillbirth, and 33 organisations reported that staff can avail of sick leave or bereavement leave in the event of a miscarriage.

4 organisations reported that maternity leave may be available to staff in the event of a miscarriage.

10 organisations that reported on their leave policies related to stillbirth did not report having a leave policy in the event of a miscarriage.

Among the 45 organisations that reported some form of leave available to staff in the case of a stillbirth or miscarriage, 6 recognised and provided leave benefits to partners of the childbearing parent.

18 organisations reported that they provide full maternity leave benefits to staff who suffer the loss of an infant before birth. In determining leave benefits, some organisations referred to national definitions of what constitutes a miscarriage or a stillbirth. 4 organisations defined the gestational week at which a pregnancy loss is characterised as a stillbirth, ranging from 20 weeks to 28 weeks.

“PWC HAS INTRODUCED A MISCARRIAGE LEAVE POLICY OF 10 DAYS PER ANNUM FOR PREGNANCY LOSS PRIOR TO 20 WEEKS OF GESTATION TO PROVIDE SUPPORT DURING A DEEPLY PERSONAL AND CHALLENGING TIME. THIS LEAVE IS ALSO AVAILABLE TO THE PARTNER OF SOMEONE WHO EXPERIENCES A MISCARRIAGE AND BUILDS ON AN EXISTING POLICY WHERE FULL PARENTAL LEAVE ENTITLEMENTS ARE AVAILABLE IF A CHILD IS STILLBORN (FROM 20 WEEKS GESTATION).”

PART 1. RESULTS

MENOPAUSE

Menopause marks the end of menstruation, occurring either naturally or as a result of surgery or chemotherapy. While the term ‘menopause’ refers to that point when a woman (or anyone who usually menstruates) has not had a period for 12 months, the perimenopause leading up to the menopause can last 10 years or even longer. Symptoms during this time can include mental and physical changes – such as challenges with temperature control, mental concentration, tiredness, etc – many of which may require support, sensitivity and signposting to appropriate services and resources in the workplace and beyond.

LEGAL TERRAIN

With demographic shifts seeing people living longer, retirement ages rising, and people spending more years in the workplace, discussions around menopause and the law is “having a moment” in some countries. Legal responses to these shifts vary from country to country, with laws against discrimination on the grounds of sex, age and/or disability providing legal cover for some people. Research in the UK during the period 2017 – 2022 found 16 case reports where women’s menopausal symptoms had been the grounds for a claim of discrimination or unfair dismissal. Twelve of the sixteen cases were unsuccessful – highlighting the question of whether the legal framework in the country is suitable for addressing menopause-related discrimination in the workplace.

THE WORKPLACE

Research suggests a correlation between menopausal-perimenopausal symptoms and women’s early exit from the labour market. A 2022 report by the Fawcett Society in the UK found that 44% of over 4000 women surveyed had their ability to work affected by symptoms, and almost one in ten women had left their jobs as a result of symptoms (this figure rose to one in five women with a disability). Workplaces generally did not meet the needs of menopausal or perimenopausal women: eight in ten women reported lack of information-sharing in the workplace, absence of policies, and absence of support networks, while eight in ten women also thought that every employer should have a workplace policy and action plan.

SETTING STANDARDS

In May 2023 the British Standards Institution published a set of standards for addressing menopause and menstrual health in the workplace. Some employers in the UK have already implemented menopause policies to support women going through the menopause, with measures such as flexible working, paid leave opportunities, and the right to request changes in task allocation, among others.
**FINDINGS**

21 organisations shared information related to menopause in the workplace.

1 organisational menopause policy found.

3 organisations reported that they hosted menopause awareness and discussion sessions with staff.

12 reported that staff can avail of sick leave in the event of severe menopause symptoms.

3 large for-profit UK-based companies are accredited as a ‘Menopause Friendly Workplace’ (Bristol-Myers Squibb, Medtronic, Unilever), which is given by a UK-based independent body.

---

**POLICIES RELATED TO MENOPAUSE**

**MENOPAUSE POLICY**

- CARE International
- International Center for Research on Women

**WORKPLACE DISCUSSIONS**
Organisation reports hosting awareness and discussion sessions

- Global Alliance for Improved Nutrition
- International Rescue Committee
- UNICEF
As part of our organisational commitment to providing an inclusive and supportive working environment for all team members, we identified a need to raise awareness and understanding, outline the support available and encourage team members to have open conversations about menopause. We recognise that stigma and misinformation around menopause still exist and wanted to ensure that our team members have access to the right information and support from MSI, when they need it.

This led to the introduction of our Menopause Policy for MSI’s Global Support Office in 2021, on World Menopause Awareness Day, which is celebrated on 18th October each year. In developing our policy, we worked with our clinical colleagues, who provided the evidence and medical knowledge needed to create practical, informed guidance for both those experiencing menopause directly, as well as their partners, colleagues and others who wish to support them. We also collaborated with our Team Member Council, to ensure that the policy was aligned with the real-life needs and experiences of our colleagues.

Introducing this policy has allowed us to begin breaking down that stigma and creating a working environment in which those experiencing menopause feel able to thrive.

“When I was about 46, I nearly left the workforce,” shares Jane Caldwell, Head of Operations and Resources at Medicines Patent Pool. Jane found herself battling debilitating symptoms of perimenopause that shook her confidence in her own intellectual abilities and made her question her future career. Inspired by her personal experience, Jane took the initiative to introduce a comprehensive menstrual and menopause policy in her previous workplace. However, when she announced it at an all-staff meeting, a wave of giggles rippled through the room. Jane firmly believes that this kind of stigma is one of the most significant barriers to achieving gender equality.

Jane passionately explains, “A crucial purpose of menstrual and menopause policies is to normalise and prioritise these experiences. By doing so, organisations send a clear message that they value and address these issues as significant and important matters.” When asked about advocating for similar policies in other workplaces, Jane suggests that the power of facts cannot be overstated. If an organisation’s management genuinely cares about women’s careers and gender equality, this is one of the most vital considerations to attract and retain female talent.

“Islamic Relief Worldwide works on increasing representation of female staff, and took the decision to develop a menopause policy due to feedback received from employees who are going through this potentially difficult phase. We want to ensure that employees feel fully supported, and both men and women’s roles are equally appreciated and empowered. Creating this policy means being clear on how we can assist our employees in the workplace through providing an environment where the challenges that menopause poses can be openly discussed and we can work collectively to put the right support mechanisms in place for employees.”

Waseem Ahmed, CEO, Islamic Relief Worldwide
VIOLENCE IN THE HOME

Violence against women is a violation of human rights and a major public health problem. WHO estimates that more than a quarter of women aged 15-49 years old have been subjected to sexual or physical violence from an intimate partner.

Workplaces have the potential to provide a safe and supportive environment for employees who may be experiencing abuse or violence at home. Policies should include confidential reporting mechanisms, access and signposting to support services, workplace safety measures, and compassionate leave to protect and assist employees facing these situations.

FINDINGS

21 organisations reported having a domestic violence policy or providing dedicated support to staff who may be experiencing domestic violence. Policies included: time off to obtain legal, medical, or other support; having a designated staff member trained to receive enquiries and provide guidance to staff; offering access to counselling; publicising support and resources; conducting resilience training and workplace awareness initiatives on domestic violence.

8 organisations reported that staff may use existing sick or personal leave to seek health, social or legal assistance.

POLICIES RELATED TO DOMESTIC VIOLENCE

LEAVE

Organisation reports that employees may use existing leave in the case of domestic violence

- Abt Associates
- Equimundo
- FIND
- International Vaccine Institute
- Ipas
- Management Sciences for Health
- Population Council
- Population Services International

"[THE PACIFIC COMMUNITY] IS COMMITTED TO HEIGHTENING AWARENESS OF DOMESTIC VIOLENCE AND TO PROVIDING GUIDANCE TO ALL STAFF ON HOW TO PREVENT ITS OCCURRENCE AND ADDRESS ITS EFFECTS. SPC SEeks to create a supportive workplace in which staff feel able to discuss domestic violence and seek the necessary help and advice. All staff have the responsibility of promoting a safe and respectful working environment free of violence and intimidation, and being sensitive to, and non-judgmental towards, victims of domestic violence.”

Manual of staff policies, Pacific Community
**FINDINGS**

**CARING RESPONSIBILITIES**

Supporting employees with caring responsibilities for family members, including children and dependent adults, can help address the double burden of care that particularly affects women and reduce stress in the workplace. Later we review parental leave; this section refers to employees with other types of caring responsibilities. Growing numbers of people in older age groups (45+ years) in the workforce are taking on caring responsibilities for older relatives. This means that caring is not just an issue of importance for younger employees with children, but an issue for everyone. Workplaces have responded to the family and caring responsibilities of employees in a number of ways, including flexible working arrangements, provision of carers’ leave, and signposting to resources that provide care and peer networks.

**FLEXIBLE WORKING**

The COVID-19 pandemic promoted the adoption of flexible working arrangements for many in the global health workforce. Research shows that, with sufficient support from leadership and supervisors, flexible working arrangements (such as condensed working hours, teleworking, flexible hours, term-time working, etc) can be powerful tools to enhance staff inclusion. These kinds of flexible arrangements can be helpful in relation to different SRHR issues; for example allowing people to fit in medical appointments or taking ‘time out’ or working at home in order to cope with menstrual pain and discomfort. Flexible working patterns can mean that employees can potentially accommodate SRHR needs without having to take time off.

59% of organisations (117/197) reported, either on their website or directly to GH5050, that flexible working arrangements are available to employees. This is compared to 30% in 2019.

This figure does not take into account the situation in countries where flexible working is governed by national law. Our finding represents those organisations where GH5050 was able to find mention of flexible working on the organisation’s website or policy.

Some organisations reported that while flexible arrangements were available to locally-hired staff and third-country national staff in some offices, particularly in the US and Europe, these were not in practice across all country offices, in part due to local laws and culture.
PART 1. RESULTS

ANTI-SEXUAL HARASSMENT POLICIES

A comprehensive anti-sexual harassment policy guides an organisation’s approach to preventing and addressing sexual harassment, and can contribute to the creation of a work environment based on dignity and respect. Drawing on good practice, existing global norms (including the UN model policy), a range of public and private sector guidelines, and peer-reviewed publications, GH5050 identified four elements of a comprehensive sexual harassment policy (see Box).

**Box 7. GH5050 Four Best Practice Elements of a Comprehensive Sexual Harassment Policy**

- **Commitment and Definition**
  Does the policy: state the organisation’s zero-tolerance approach to sexual harassment; sufficiently define sexual harassment, and/or provide clear examples of sexual harassment?

- **Confidentiality and Non-Retaliation**
  Does the policy: guarantee confidentiality of the investigation; and non-retaliation for complainants?

- **Training**
  Does the policy guarantee mandatory training for all staff?

- **Reporting and Accountability**
  Does the policy describe: formal and informal reporting processes; sanctions that will apply to those who commit sexual harassment; how complaints will be investigated; and whether results of investigations reported back to all staff?

46% (90/197) of organisations published their sexual harassment policies online compared to 32% in 2019.

An additional 20 organisations shared their internal policies and gave permission to code them.

67% (73/110) of policies reviewed performed adequately by including at least two of the four essential best practices in their policies.

44% (48/110) included all four elements of best practice compared to 34% in 2019.

67% (73/110) of policies reviewed performed adequately by including at least two of the four essential best practices in their policies.

44% (48/110) included all four elements of best practice compared to 34% in 2019.
Equitable paid parental leave policies support gender transformative norms around family responsibility, women’s equality in career opportunities, compensation for women’s unpaid labour, and closure of the gender pay gap. Such entitlements further contribute to gender equal recruitment, improved employee morale and better health and wellbeing of families.

Parental leave policies are universal and equitable when they are explicit in providing the same rights to leave and benefits to all parents, whether single, same-sex, and/or adoptive. Despite calls for equality and universality, parental leave policies are frequently applied unequally or written in language that discriminates against or excludes some staff. For example, lengthy leave entitlements provided to women in the absence of similar entitlements for men can reinforce unequal parenting norms and harm women’s careers over the long-term.

GH5050 assessed the number of paid weeks of leave available to primary and secondary caregivers as well as options for parental and shared parental leave. It also reviewed whether the organisation offered support to parents returning to work, such as flexible transitions back to work, reduced or part-time working hours, facilities for breastfeeding mothers, and/or childcare support.

Organisations in the US (where 71/197 of our sample are headquartered) often offer the fewest number of paid weeks. They also almost uniformly offer the same benefits to both parents (gender neutral). This is in addition to 6-8 weeks of paid leave for birth mothers covered by short-term disability insurance.

Organisations headquartered in Japan, Sweden, Norway and the UK found to offer the longest paid leave benefits to both parents.

Guaranteed paid leave for primary and secondary caregivers ranges from 2 to 39 weeks.

45%
(89/197) of organisations published detailed information on parental leave policies online. - compared to 33% in 2021 and 27% in 2019.

44%
Organisations shared their internal policies directly with GH5050. Some organisations report refraining from publishing parental leave policies as they may not be standardised across the organisation.
1. Most employees in the United States who give birth also have access to paid short term disability leave of 6-8 weeks.

2. Eight weeks for primary caregiver adoption leave, as parent would not qualify for short-term disability leave (US-based).
PART 1. RESULTS

ADOPTION AND/OR SURROGACY

People pursue parenthood in diverse ways, including through adoption and surrogacy. Parental leave policy in these instances exists to provide paid or unpaid time off to new parents enabling them to bond with their adopted child and support employees in their transition to parenthood.

112 (83%) of 135 policies reviewed were explicitly inclusive of adoption and surrogacy.

Several organisations cover eligible staff expenses relating to the adoption of a child or the use of a surrogate, ranging from US$5,000 to $20,000.

Some organisations specify that a certain proportion of primary caregiver leave is exclusive to the birth parent for the physical recovery period. Otherwise, no differences found in the length of leave available to new biological or adoptive parents.

Ambiguity exists in some policies in terms of whether surrogate women are afforded the same rights and benefits as other pregnant women, or as people who become parents through surrogacy. Policies appear to cover only staff that are contracting a third-party surrogate, rather than serving as a surrogate themselves.

SUPPORT TO NEW PARENTS

Parents, particularly women, can struggle to manage the transition back into the workplace. New mothers are more likely than new fathers to switch to part-time work, and to exit the labour force. Employers can provide a supportive environment including flexible working, financial support, and employment security to ensure that women are able to return to the workplace effectively, and stay there.

121 ORGANISATIONS, UP FROM 96 IN 2021

Alongside entitlements of returning to a previous post (or equivalent) after a period of leave, some organisations offer support to returning parents, such as flexible working, provision of private spaces/time for lactation, shipping breast milk when travelling on business, on-site childcare and/or financial support for childcare options. Some organisations also offer specific programmes including career coaching and dedicate resources to support back to work transitions. It is unclear from our review whether these benefits are equally available and accessible to women and men.
In a room filled with determined women, the mission is clear: to make access to banking services more inclusive and attainable for women. In Nigeria, the lack of access to financing options, particularly loans, has posed a significant barrier for women in business. This disparity highlights the pervasive gender inequality that exists, as many financial institutions have been reluctant to provide women with the necessary loans to grow their enterprises. As a result, numerous women-owned businesses have remained stagnant or even faced closure due to insufficient funds needed to sustain or expand their operations.

Aderemi Davies aka AyaworanHO3D is a Nigerian documentary photographer and filmmaker who extensively uses his art to celebrate African indigenous values, cultures, people, places, arts and identity in general.
PART 2

OVERVIEW

Six years of robust evidence summarised in the Gender and Health Index reveals where progress is being made and where it is not, and whether and how organisations are using the findings of the Index to drive change. The sample assessed each year by GH5050 is composed of 197 highly heterogeneous organisations, each with their own unique purpose, system of governance and organisational arrangements. This sample has grown from 135 organisations assessed since 2018. Staff numbers range from four to half a million employees. What binds them is a stated interest in influencing health outcomes and/or global health policy.

Core variables assessed each year:

- Public commitment to gender equality
- Public definition of gender
- Workplace gender equality policy
- Workplace diversity and inclusion policy
- Board diversity and inclusion policy
- Gender distribution in senior management and on the board
- Demographic characteristics of the CEO and board chair
- Programmatic data disaggregated by sex

AMONG 135 ORGANISATIONS ASSESSED SINCE 2018
% organisations, 2018 and 2023 (number of organisations in brackets)

- No public commitment to gender equality found, 2018 and 2023: 13% (18)
- No public definition of what “gender” means to the organisation, 2018 and 2023: 50% (68)
- No published workplace policy with measures to advance gender equality, 2018 and 2023: 21% (28)
- Fewer than 34% women in senior management, 2018 and 2023: 21% (28)
- Fewer than 34% women on the governing body, 2018 and 2023: 21% (28)
- Have not had a woman CEO since 2018: 55% (74)
- Have not had a woman Board Chair since 2018: 43% (58)
- Have not had a woman CEO or Board Chair since 2018: 33% (45)
PUBLIC COMMITMENT TO GENDER EQUALITY

Gender equality is a human right and a precondition for realising all goals in the 2030 Sustainable Development Agenda, including health and well-being. GH5050 reviews organisations’ visions, missions and core strategy documents in the public domain to determine whether an organisation states a commitment to gender equality.

Public commitments to gender equality have grown quickly over the past six years. Organisations are also increasingly embracing a more inclusive and comprehensive concept of gender equality; one that focuses not only on the empowerment of women and girls but one in which all people, regardless of their gender, will benefit from tackling restrictive gender norms and shaping a more just society. The number of organisations that transcend the gender binary and explicitly include transgender and/or non-binary people in their promotion of gender equality has grown from 17% to 45% in just two years.

85% of organisations publicly commit to gender equality (167/197)

PUBLIC COMMITMENTS TO GENDER EQUALITY HAVE RISEN RAPIDLY FROM

56% in 2018 to 86% in 2023 among 135 organisations assessed over six years.
DEFINING GENDER AND ITS MEANING TO AN ORGANISATION

Gender definitions reflect the depth and breadth of an organisation’s understanding of power and equality and how that informs decision-making and practice. Definitions of gender also display core values and help to define responses to how people operate and relate to each other in the workplace, across the health sector and beyond. Given the contested understanding of gender in many societies, and 25 years after the global conferences of Beijing and Cairo, clarity in organisational commitments to gender equality and clarity of concept is long overdue.

SLOW CHANGE
45% OF ORGANISATIONS PUBLISH A DEFINITION OF GENDER, UP FROM 32% IN 2018

45% IN 2023
32% IN 2018

DEFINING GENDER: SONKE GENDER JUSTICE’S APPROACH

Gender roles and expectations are learned. They can and do change over time and they vary within and between social, cultural and religious groups. Systems of social differentiation, like political status, class, ethnicity, disability and age, shape gender roles; and because they are constructed, they can also be reconstructed by faith leaders and communities to create more equitable gender relations.

Understanding gender is important because a gender-analysis can reveal how patriarchy harms both men and women; understanding the way gender norms are created is also important because once we see how subordination and domination are constructed along the lines of gender and sexuality, it becomes more possible to also see how harmful norms can be changed.
WORKPLACE GENDER EQUALITY, DIVERSITY AND INCLUSION POLICIES

Legal frameworks exist to protect workers against discrimination, yet this is not enough to counteract the individual bias and structural discrimination that disadvantage people on the basis of gender. Ensuring equality of opportunity requires clear policies with specific and actionable measures. Support for diversity, inclusion and gender equality in the workplace means policies and practices that foster a supportive organisational culture for all staff and requires corporate commitment, specific measures, particularly at times of career transition points, and accountability for redressing barriers to equitable advancement.

GH5050 assessed which organisations (with 10 or more employees) had publicly available policies that committed to advancing gender equality and/or diversity and inclusion (D&I) in the workplace, and which had specific measures in place to guide and monitor progress. We found a relatively rapid increase in the availability of D&I policies since 2020, and a much slower increase in gender equality policies.

ORGANISATIONS WITH POLICIES WITH SPECIFIC MEASURES* IN PLACE, 2020-2023

Notable change among the 135 organisations assessed over six years:

<table>
<thead>
<tr>
<th>Year</th>
<th>Gender equality</th>
<th>D&amp;I</th>
</tr>
</thead>
<tbody>
<tr>
<td>2020</td>
<td>60%</td>
<td>45%</td>
</tr>
<tr>
<td>2021</td>
<td>62%</td>
<td>53%</td>
</tr>
<tr>
<td>2022</td>
<td>62%</td>
<td>55%</td>
</tr>
<tr>
<td>2023</td>
<td>65%</td>
<td>65%</td>
</tr>
</tbody>
</table>

* Specific measures found include, for example: policies for inclusive recruitment processes; mentoring, training and leadership programmes; targets for representation at senior levels; gender/diversity analysis and action in staff performance reviews and staff surveys; regular reviews of organisational efforts towards D&I, and; reporting back to all staff.
PART 2

MORE POLICIES AMONG LARGER ORGANISATIONS

Gender equality policies found for:

- 39% of organisations with 10-49 staff
- 41% of organisations with 50-249 staff
- 69% of organisations 250-1000 staff
- 79% of organisations with 1000+ staff

MISSING POLICIES

No gender equality or D&I policy found for 20 large organisations (250 or more staff, n=131)

- 1 Consultancy
- 5 Faith-based organisations
- 6 NGOs
- 4 Funders
- 1 For-profit company
- 1 Regional body
- 2 Research bodies
BOARD DIVERSITY AND INCLUSION POLICIES

Governing boards represent the locus of power in organisations where decisions on leadership, strategy, finance, and programming are made that influence the career opportunities and health outcomes of people around the world. The 2022 Global Health 50/50 Report Boards for All highlighted that in the corridors of power and the rules determining who is given a platform to govern, considerations of gender and diversity are all too often lacking. People from low-income countries are largely denied the opportunity to contribute to the governance of global health, with women particularly under-represented.

Globally, demands for gender equality and broader diversity on boards are loud and growing, bolstered by evidence that diverse and inclusive boards are more innovative and effective. Yet this is not yet being translated into publicly-available policies for D&I on governing bodies.

<table>

<td></td>
<td></td>
<td></td>
<td>42%</td>
</tr>
</tbody>
</table>
**GENDER AND GLOBAL HEALTH LEADERSHIP**

Power imbalances pervade the global health system, visible in the lack of gender equality and diversity in the highest positions of leadership. Who holds positions of authority provides a strong measure of the progress that organisations are making in fostering equity in career advancement, decision-making and power.

We found a sluggish average increase of 1.25% in women CEOs and board chairs each year since 2020. At the current rate of change, leadership of organisations active in global health will not reach gender parity by the 2030 deadline for the Sustainable Development Goals.

### CEOs

<table>
<thead>
<tr>
<th>Percentage</th>
<th>Men</th>
<th>Women</th>
</tr>
</thead>
<tbody>
<tr>
<td>68%</td>
<td>131</td>
<td>194</td>
</tr>

</tbody>
</table>

### BOARD CHAIRS

<table>
<thead>
<tr>
<th>Percentage</th>
<th>Men</th>
<th>Women</th>
</tr>
</thead>
<tbody>
<tr>
<td>65%</td>
<td>115</td>
<td>178</td>
</tr>
<tr>
<td>in 2020</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ALL LEADERS (CEO AND BOARD CHAIRS)

<table>
<thead>
<tr>
<th>Percentage</th>
<th>Men</th>
<th>Women</th>
</tr>
</thead>
<tbody>
<tr>
<td>66%</td>
<td>246</td>
<td>372</td>
</tr>
<tr>
<td>in 2020</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Assuming this trajectory is maintained, gender parity among CEOs and board chairs will be reached in 14 years.**
WHERE ARE THE WOMEN?

Among 135 organisations assessed since 2018:

- **74** organisations have not had a woman CEO in this period.
  Compared to 26 organisations that have not had a man CEO.

- **58** organisations have not had a woman board chair in this period.
  Compared to 12 organisations that have not had a man board chair.

- **45** have not had a woman CEO or a woman board chair in this period.
  Compared to 5 organisations that have not had a man CEO or board chair.

DESPITE PROGRESS, DECISION-MAKING BODIES STILL MORE LIKELY TO HAVE MORE MEN THAN WOMEN

**SENIOR MANAGEMENT**

- **39%**
  - **Parity** (45-55% women)

- **38%**
  - **More men than women** (56%+ men)

- **23%**
  - **More women than men** (56%+ women)

**BOARDS**

- **35%**
  - **Parity** (45-55% women)

- **52%**
  - **More men than women** (56%+ men)

- **13%**
  - **More women than men** (56%+ women)

Notable progress is being made in reducing the number of gender-unequal decision-making bodies (organisations assessed from 2018-2023):

- **Senior management bodies with fewer than 44% women**
  55% in 2018 ↓ 39% in 2023

- **Boards with fewer than 44% women**
  75% in 2018 ↓ 54% in 2023
PART 2

PROPORTION OF WOMEN IN LEADERSHIP VARIES BY BODY AND BY SECTOR

- **UN System**: 59% women in senior management, 55% in boards, 50% gender parity
- **NGOs**: 51% women in senior management, 49% in boards, 50% gender parity
- **Regional organisations**: 49% women in senior management, 43% in boards, 49% gender parity
- **Public-private partnerships**: 46% women in senior management, 38% in boards, 41% gender parity
- **Consultancy firms**: 35% women in senior management, 38% in boards, 38% gender parity
- **Bilaterals**: 41% women in senior management, 39% in boards, 39% gender parity
- **Funders**: 39% women in senior management, 41% in boards, 41% gender parity
- **Research organisations**: 38% women in senior management, 39% in boards, 39% gender parity
- **Faith-based**: 38% women in senior management, 39% in boards, 39% gender parity
- **Private sector**: 32% women in senior management, 32% in boards, 32% gender parity
2023 saw a higher than average turnover in CEOs and Board Chairs (40%). The cohort of incoming leaders had much higher representation of people from low- and middle-income countries (LMICs) than previous years.

Among 82 new leaders in 2022/2023, 37% were women, 40% were from LMICs, and 22% had completed their education in LMICs.
THE UNREALISED POTENTIAL OF DISAGGREGATED DATA

The unrealised potential of disaggregated data

Sex-disaggregated data is fundamentally necessary both for organisations to implement gender-responsive health programmes that rely on evidence, and for others to hold organisations accountable for their commitments and actions. Understanding the distribution of ill-health, who is benefitting from interventions, and who is being left behind should be firmly embedded in both responses to health crises and in health programmes generally.

SDG17.18 states that countries should be supported to produce timely and reliable data disaggregated by income, gender, age, race, ethnicity, migratory status, disability, geographic location and other characteristics relevant in national contexts. However, GH5050 findings point to a global health system that, despite decades of evidence, still does not grasp the urgency and vitality of sex-disaggregated data. The gendered experience of COVID-19, and the value of sex-disaggregated data during the pandemic, should have been an alarm call for action. GH5050’s ‘Sex, gender and COVID-19 project’ highlighted the inequities along a pathway from testing to illness or death, as well as the near absence of data disaggregated by race/ethnicity, disability or refugee status.32

Still, many organisations are failing to integrate evidence from sex-disaggregated data into their programming and responses, and global health is poorer as a result.

PART 3
ORGANISATIONAL PERFORMANCE, 2023, AND TRENDS OVER FOUR YEARS

A woman sits in the middle of a painting and looks directly at us, her face without a mark of expression. She finds herself encircled by men, each wearing a smirk. The woman appears almost statue-like, frozen in time. The artwork seeks to shed light on the challenges that women encounter within male-dominated work environments. It serves as a visual representation of the obstacles and hardships that women often confront, emphasising the need for equality and inclusivity in the workplace. There is a sense that everyone is in motion except her.

Seldjan Behari is an Albanian-born artist and painter currently living in the UK.
ORGANISATIONAL PERFORMANCE
2023

An organisation’s performance is calculated using a point system across eight variables. Gender of CEO and Board Chair is not scored. Organisations with 10 or fewer staff are not expected to have workplace gender/diversity policies and are not scored on these variables. GH5050 did not review or include one of the core variables - gender-responsive programmatic strategies - in the 2023 report or the following calculations. See Annex 1.2 for further details.

</table>
GH5050 has collected data on 196 of the current sample of 197 organisations since 2020. Forty organisations have continuously performed well across the variables collected. These organisations have transparent policies and measures in place to advance gender equality and are at or near gender parity in their decision-making bodies. They are also often the most likely to engage with GH5050 during the data validation process, which may be further indication of their interest in and support for transparency and public accountability.

Another subset of 61 organisations has demonstrated increasing commitment to set and strengthen gender-responsive policies, where GH5050 had previously reported them lacking or unavailable. Over the period 2020-23, these organisations have improved their overall score, and the majority of them have engaged regularly with GH5050 and actively responded to the findings of the Gender and Health Index.

By contrast, we find that the scores of 37 organisations have been consistently low and little to no progress has been made. Only a few of these organisations have engaged with GH5050 in any meaningful way, including to validate and contribute to the findings reported in the Index, which may also be an indication of the relatively lower level of interest and resources invested in gender, diversity and inclusion measures by the organisation.

Find the detailed methods on how performance has been calculated in Annex 1.2.

### PERFORMANCE OVER FOUR YEARS: CONSISTENTLY HIGH PERFORMERS, FAST RISERS AND STAGNATORS, 2020-2023

40 organisations have scored at least 4 out of 8 total points each year for the past four years.

- Africa Population and Health Research Centre
- CARE International
- Deutsche Gesellschaft für Internationale Zusammenarbeit
- EngenderHealth
- FIND*
- Gavi, the Vaccine Alliance
- Global Affairs Canada
- Global Alliance for Improved Nutrition*
- Global Financing Facility
- Global Fund to Fight AIDS, Tuberculosis & Malaria
- Health Action International
- Health Systems Global
- International Federation of Medical Students
- International Labour Organization
- International Planned Parenthood Federation
- Jhpiego
- Joint United Nations Programme on HIV and AIDS (UNAIDS)
- Medicines Patent Pool
- Mercy Corps*
- National Institutes of Health
- Norwegian Agency for Development Cooperation*
- Palladium Group
- Partnership for Maternal, Newborn and Child Health
- PATH
- Plan International
- Population Services International
- Reproductive Health Supplies Coalition
- Scaling Up Nutrition
- Stop TB Partnership
- Swedish International Development Cooperation Agency
- UN Women
- UNHCR
- UNICEF
- Unitaid
- United Nations Development Programme
- United Nations Office on Drugs and Crime
- United Nations Population Fund
- World Bank Group
- World Food Programme
- World Health Organization

An * indicates organisations who are consistently high performers and are also fast risers.

### FAST RISERS

61 organisations that have increased their scores by at least 4 points since 2020 or 3 points since 2021.

- Alliance for Health Policy and Systems Research
- Cordaid
- DSM
- European Commission
- FHI 360
- GBC Health
- International Center for Research on Women
- Ipas
- Medicines for Malaria Venture
- MSI Reproductive Choices
- Novo Nordisk
- Open Society Foundations
- Oxfam International
- Pacific Community
- Partners In Health
- Pathfinder International
- Population Council
- RBM Partnership to End Malaria
- Save the Children
- Sonke Gender Justice
- United States Agency for International Development

### Scored 5+ points in 2023

- Africa CDC
- Agence Française de Développement
- American Jewish World Service
- Association of Southeast Asian Nations
- Becton, Dickinson and Company
- Bill & Melinda Gates Foundation
- Bloomberg Philanthropies
- BP
- Bristol-Myers Squibb
- Caribbean Public Health Agency
- Caritas Internationalis
- Catholic Medical Mission Board
- Clean Cooking Alliance
- Elizabeth Glaser Pediatric AIDS Foundation
- Gilead
- Global Handwashing Partnership
- Health Poverty Action
- Intel
- International Vaccine Institute
- Islamic Relief Worldwide
- KPMG
- McCann Health
- Medela

### Scored 1-4 points in 2023

- Africa CDC
- Agence Française de Développement
- American Jewish World Service
- Association of Southeast Asian Nations
- Becton, Dickinson and Company
- Bill & Melinda Gates Foundation
- Bloomberg Philanthropies
- BP
- Bristol-Myers Squibb
- Caribbean Public Health Agency
- Caritas Internationalis
- Catholic Medical Mission Board
- Clean Cooking Alliance
- Elizabeth Glaser Pediatric AIDS Foundation
- Gilead
- Global Handwashing Partnership
- Health Poverty Action
- Intel
- International Vaccine Institute
- Islamic Relief Worldwide
- KPMG
- McCann Health
- Medela
STAGNATING LOWER PERFORMERS

37 organisations that have not scored above 1 since 2020 and have not increased their score by more than 1 point since 2020, or whose scores have decreased by 3 or more points since 2020.

- AB InBev
- ACTION Global Health Advocacy Partnership
- Action on Smoking and Health
- Advocates for Youth
- Aliko Dangote Foundation
- amfAR, Foundation for AIDS Research
- AVERT
- Caterpillar Foundation
- Catholic Relief Services
- China Foundation for Poverty Alleviation
- Global Alliance for Tobacco Control
- Global Health Innovative Technology Fund
- Global Road Safety Partnership
- i+solutions
- icddr,b
- International Council of Beverages Associations
- International Diabetes Federation
- International Federation of Pharmaceutical Manufacturers and Associations
- McKinsey & Company
- Medtronic
- Ministry of Foreign Affairs of the Netherlands
- Movendi International
- Nestlé
- Novartis
- Partners in Population and Development
- Pfizer
- PwC
- Rockefeller Foundation
- Safaricom
- Salvation Army International
- SRHR Africa Trust
- Sumitomo Chemical
- Vestergaard Frandsen
- West African Health Organization
- World Council of Churches
- World Obesity Federation

UNEVEN PERFORMERS

42 organisations whose scores have not changed by more than 2 points in either direction since 2020 and do not fall into other categories.

Scored 3-5 points in 2023
- Abt Associates
- African Union Commission
- BRAC
- Centers for Disease Control and Prevention (US)
- Dalberg
- Drugs for Neglected Diseases Initiative
- Fundação Oswaldo Cruz
- Global Health Council
- Institut Pasteur
- International AIDS Society
- John Snow, Inc
- Nutrition International
- Population Reference Bureau
- Unilever
- United Nations Economic Commission for Africa

Scored 0-2 points in 2023
- AbbVie
- Clinton Health Access Initiative
- Coca-Cola
- Eli Lilly and Company
- European Centre for Disease Prevention and Control
- Foreign, Commonwealth & Development Office
- GlaxoSmithKline
- GSMA
- International Union Against Tuberculosis and Lung Disease
- Japan International Cooperation Agency
- Management Sciences for Health
- Philips
- Reckitt Benckiser Group
- Teck Resources
- Union for International Cancer Control
- World Economic Forum

Scored -5 to -2 points in 2023
- Amref Health Africa
- ExxonMobil
- International Federation of Pharmaceutical Wholesalers Foundation
- Allight
- Aga Khan Foundation
- Islamic Development Bank
- World Heart Federation
- Africa Christian Health Association Platform
- International Food and Beverage Alliance
- Consumer Brands Association
ANNEX. METHODS

1.1 SAMPLE, DATA COLLECTION AND VALIDATION WITH ORGANISATIONS

To measure concepts as contextual as diversity and equality with a standardised, simple methodology may seem a fool’s errand. We recognise what has been called the ‘violence’ committed to nuanced concepts such as intersectionality when we attempt to reduce them to measurable indicators. Nonetheless, we are all aware that what gets measured, gets done.

ORGANISATIONAL SAMPLE AND CRITERIA FOR INCLUSION

This Report reviews 197 organisations active in global health. GH5050 defines “global organisations” as those with a presence in at least three countries. The sample includes organisations actively involved in global health and those organisations that aim to influence global health policy even if this is not their core function. Inclusion of an organisation does not signify GH5050’s endorsement of its activities, nor that GH5050 considers the organisation to be contributing to advancing population level health in a positive direction. Rather, organisations under review have been identified as having demonstrated an interest in influencing global health and/or global health policy.

Between 2018 and 2020, the sample shifted in its composition to account for 1) the thematic focus of the Report each year, 2) continued efforts to identify global organisations headquartered in low- and middle-income countries, and 3) the general evolution of the global health architecture.

Ten sectors are represented in the 2023 sample:

1. Public-private partnerships (PPPs), defined as those partnerships with for-profit and public sectors represented on their governing bodies
2. UN system agencies working in the health, nutrition and labour fields
3. Bilateral and global multilateral organisations, including the 10 largest bilateral contributors of development assistance for health in the period 2005-2015
4. Funding bodies, including philanthropic organisations
5. Non-governmental and non-profit organisations, which can include industry groups registered as charitable organisations (e.g. 501(c)(3) in the US)
6. Private sector for-profit companies: Corporate participants in the Business and Health Action Group of the Global Business Council that provided a platform for the engagement of business in setting the health-related targets of the SDGs, or companies that contributed to consultations on the Uruguay Road Map on noncommunicable diseases
7. Consultancy firms with an interest in the health sector
8. Research and surveillance institutions
9. Faith-based organisations
10. Regional organisations

We recognise the limitations of grouping organisations by sector, particularly in light of the unique features of many in our sample that preclude distinct categorisation. We have sought to establish clear rationale for the categorisation of each organisation, at times directly with the organisation.

APPROACH AND METHODS FOR DATA COLLECTION

GH5050 has developed a rigorous methodology that is consistent with established systematic review research methods. At least two reviewers extract each data item independently, and a third reviewer verifies the data. The reviewers discuss any discrepancies in data extraction until they reach a consensus. Data are coded according to content, using a traffic light system established in advance of data collection and refined iteratively.

The majority of data collected and analysed comes from publicly-available websites. Transparency and accountability are closely related and by relying on publicly-available data we aim to hold organisations and stakeholders to account - including for having gender-related policies accessible to the public. Aside from human resources policies (see below), we do not ask for confidential information, information of a commercially sensitive nature or information that would identify individuals in organisations (other than the gender of the CEO, for example, which is publicly available for all included organisations).
This year’s report covers human resources policies - some of which remain internal to the organisation itself and have not been published in the public domain. At the start of our data collection we requested organisations to share relevant policies with us. The policies have been coded and we have indicated, where appropriate, when these were internal rather than public policies. As per ethical approval (see below), these internal policies were stored by us on secure servers and will be destroyed from our servers after an agreed length of time.

Several variables assess the availability and contents of policies. We do not consider newsletters or blogs as evidence of policy. Further, for workplace-related policies, we do not consider the contents of job advertisements as evidence of policy. Rather, we look for evidence of actual policies or an overall commitment from the organisation. This decision is also drawn from our concern that some people may not get as far as the job ads if they don’t see any commitment to equality in the main pages of the organisation itself.

Some organisations follow the workplace policies of host organisations or parent companies. In these cases, we used the same code as for the host/parent. For example, several organisations employ the workplace policies of the World Health Organization (WHO), e.g. Partnership for Maternal, Newborn and Child Health and the Alliance for Health Policy and Systems Research. Other non-workplace policy variables (e.g. gender parity in leadership, stated commitment to gender equality, etc.) are coded for each organisation individually.

For the corporate alliances and federations we looked for evidence of policies that were normatively gender equality-promoting. We did not accept evidence from members alone (e.g. IFBA has membership including Coca-Cola; we did not accept evidence of gender-responsive programmes from Coca-Cola for coding IFBA).

We used an earlier version of this methodology to review a small number of global health organisations and global PPPs in health. These reviews were published in peer-reviewed journals (The Lancet and Globalization and Health) prior to 2017.

2023 THEMATIC FOCUS: SRHR IN THE WORKPLACE

To identify and extract the information on the variables selected for inclusion in this report, we reviewed available human resource policies - those found on the internet and those shared directly with us upon request. Policies of interest were primarily: parental and other leave policies, sexual harassment policies, flexible working policies, codes of conduct, and medical and other employment benefit policies.

Organisations’ websites and shared internal policies were searched using the following search terms:

<table>
<thead>
<tr>
<th>Policy issue</th>
<th>Search terms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Menstruation</td>
<td>Menstrual, menstruation, period</td>
</tr>

<tr>
<td>Adoption, surrogacy</td>
<td>Adopt, adopted, surrogacy, surrogate</td>
</tr>
<tr>
<td>Violence in the home</td>
<td>Domestic, abuse, victim, survivor, intimate partner, violence</td>
</tr>
</tbody>
</table>

ENGAGING AND VALIDATING RESULTS WITH ORGANISATIONS

We contact each organisation at least twice during the course of data verification. Initially we inform the CEO and head of human resources, or their equivalent, about the project and the start date of data collection, using email addresses found online. In that correspondence, we request the nomination and contact details of a focal point in the organisation who can review and validate the data once collected. Following completion of data collection, we send each organisation their preliminary results and ask
them to review and provide any additional information, documentation or policies to review. In order to amend organisational scores, we request that organisations show us evidence in the public domain to support their amendment. Throughout the process of data collection, GH5050 encourages organisations to contact us to discuss queries about the process and the variables. Final results are shared with all organisations before publication.

**ETHICS**

The methods described above were approved by the ethics committee of University College London, where GH5050 was previously housed.

**STRENGTHS AND LIMITATIONS**

As far as we know, this is the only systematic attempt to assess how gender is understood and practised by organisations working in and/or influencing the field of global health across multiple dimensions (commitment, workplace policy content, gender and geography of leadership and gender-responsive programming). While our efforts may have omitted relevant measures and do not include all active organisations, this method provides the opportunity to measure status quo and report on organisations’ progress. This method has allowed us to shine a light on the state of gender equality in global health and organisations across all sectors have begun to respond to our call. We believe that the collection of data and information for measurement and accountability is a fundamental first step to change.

**1.2 ORGANISATIONAL SCORES AND RANKING**

GH5050 has developed a rigorous methodology that is consistent with established systematic review research methods. The Gender and Health Index scores organisational performance predominantly using a traffic light system (green, amber, red). The data collected and analysed comes from publicly-available websites. Organisations are invited to contribute to and validate data collected on their policies and practices at least twice during the data collection period.

Organisational performance for 2023 is categorised into five quintiles: very high performer, high performer, good performer, moderate performer, and low performer. The variables that are included in this calculation are:

1. Commitment to gender equality
2. Public definition of gender
3. Workplace gender equality policy
4. Workplace diversity and inclusion policy
5. Board diversity and inclusion policy
6. Gender parity in senior management
7. Gender parity in governing body
8. Reporting of sex-disaggregated programmatic data

We also present trends in organisational performance on the above variables over four years, which are categorised as: consistently high performers, fast risers, moderate risers, uneven performers and stagnators. Trend scores are based on organisations’ scores in 2020, 2021, 2022 and 2023.

For each variable, organisations are scored 1, 0 or -1 points, meaning that the highest possible score is 8 points, while the lowest possible score is -8 points.

**ORGANISATIONS SCORE ONE (1) POINT FOR:**

- Each green (G)
- Purple (P) for Senior Management / Governing Bodies (P indicates that more than 55% women are represented)

**ZERO POINTS (0) FOR:**

- Each amber (A)
- Member State (MS) for the board policy variable, indicating that the governing body consists of Member States and that no other board diversity policy is available
- Not Found (NF) for gender parity in senior management and governing body variables, indicating that the existence of these bodies could not be verified and/or no information on board members was found

**MINUS ONE (-1) POINT FOR:**

- Each red
- Each ‘not found’ (NF)’ for Workplace gender equality policy, Workplace diversity and inclusion policy and Board diversity and inclusion policy (i.e. policies could not be located on public website)
Notes on the scoring:

- Reporting of sex-disaggregated data: in years 2020 and 2023, this variable was scored as red, amber or green. In 2022, findings were presented as a ‘yes’ or ‘no’. To maintain consistency with the binary approach to scoring, organisations were either awarded 1 (yes) or 0 (zero) points for year 2022. For years 2020, 2021 and 2023, organisations are awarded 1 point for scoring green and 0 points for both amber and red.

- Gender-responsive programmatic responses: The 2023 Report did not collect nor report data on this variable. Organisational scores in 2020-2022 have been adjusted by removing this variable to maintain consistency with the 2023 set of variables.

- For organisations that receive scores of Not Applicable (NA), the total number of available points is reduced, so as to avoid unfairly penalising these organisations. Their final score is then adjusted to the equivalent of a denominator of 8. NAs are applied in the following cases:
  - Organisations with 10 or fewer staff receive an NA for Workplace gender equality policy and Workplace diversity and inclusion policy, unless they are subject to the policies of a larger host organisation.
  - Organisations that have informed GH5050 that they do not have a governing body receive an NA for Board diversity and inclusion policy and Gender parity in governing body.
  - Organisations that do not report programmatic data receive an NA for Reporting of sex-disaggregated programmatic data.

We have not assigned a score based on the gender of the CEO or Board Chair as we have not agreed on a methodology that is fair and defensible. We welcome your suggestions as to what a fair assessment would look like. Please email us at info@globalhealth5050.org.

As a final step we have categorised the organisations. For 2023 performance, this is categorised as following:

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Very high performer</td>
<td>Organisations that score 7 or 8 points</td>
</tr>
<tr>
<td>High performer</td>
<td>Organisations that score 5 or 6 points</td>
</tr>
<tr>
<td>Good performer</td>
<td>Organisations that score between 2 and 4 points</td>
</tr>
<tr>
<td>Moderate performer</td>
<td>Organisations that score 0 or 1 points</td>
</tr>
<tr>
<td>Low performer</td>
<td>Organisations that score between -7 and -1 points</td>
</tr>
</tbody>
</table>

For trends in organisational performance over four years, this is categorised as following:

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consistently high performers</td>
<td>Organisations that have achieved a score of at least 4 points each year for the past 4 years. An asterisk indicates those organisations that have increased their scores by at least 4 points since 2020 or by 3 points since 2021</td>
</tr>
<tr>
<td>Fast risers</td>
<td>Organisations that have increased their score by at least 4 points since 2020 or by 3 points since 2021</td>
</tr>
<tr>
<td>Moderate risers</td>
<td>Organisations that have increased their score by 3 points since 2020</td>
</tr>
<tr>
<td>Uneven performers</td>
<td>Organisations whose scores have not changed by more than 2 points in either direction since 2020 and do not fall into the other four categories</td>
</tr>
<tr>
<td>Stagnating lower performers</td>
<td>Organisations have not scored above 1 since 2020 and have not increased their score by more than 1 point since 2020, or organisations whose scores have decreased by more than 3 points since 2020</td>
</tr>
</tbody>
</table>

Full performance data across multiple years is also available in the Gender and Health Index.

Figures that appear to be seated and standing at the same time, shift and fade across the paper. The print represents the collective voice of a crowd – a crowd seeking to rise and transcend to a place or state where there is no differentiation between gender, sexuality, race, caste, creed, disability or class, where we are essentially all one and the same from within. Multiple bodies are connected in one formation, marching throughout time. The artist aims to raise awareness and spring consciousness in others about their own existence. It provides others with a different perspective on the concept of identity, that is free from the constraints of the mind.

Shivangi Ladha is an Indian artist, currently based in London and exhibiting worldwide.
